Problem Statement

THE PROBLEM WE ARE SOLVING

Traditional Ground-Level News / Content Reporting is Expensive and Slow

Traditional field reporting is costly, limited in reach, and too slow for today's fast-moving world.

1 HIGH FIELD CREW COSTS

A typical story requires multiple people on the ground.

- Reporter, camera operator, editor, and support staff
- Daily wages / fees
- Equipment cost (camera, mics, batteries, storage, etc.)

High operational cost per story

2 TRAVEL ADDS MAJOR OPERATIONAL COST

Travel, transport, and accommodation significantly increase expenses.

- Transportation (flights, local travel)
- Accommodation & meals
- Permits, local fixers, and other on-ground expenses
- Time lost in transit

Travel is unpredictable and expensive

3 LIMITED GEOGRAPHIC COVERAGE

Coverage is restricted to where teams can physically reach.

- Remote incidents often go unreported
- Smaller towns and rural areas are missed
- Depends on where teams are deployed
- Less diverse perspectives

Gaps in coverage lead to incomplete news

4 BREAKING EVENTS NEED FASTER VERIFICATION & PUBLISHING

Traditional workflow is slow from capture to publish.

- Multiple handoffs and approvals
- Editing and fact-checking delays
- By the time it's published, the story is old news

Slow turnaround for breaking news

THE RESULT: HIGH COST, SLOW PROCESS, LIMITED IMPACT

- Very high cost per publishable story
- Slow reporting and publishing cycle
- Limited reach and local blind spots
- Missed citizen perspectives and grassroots stories
- Lower speed to audience and loss of competitive advantage

We need a faster, cheaper, scalable, and people-powered way to capture and publish real-world stories.
